- Understanding of complex technical issues
- Technical studies (Master, Bachelor) in the fields of electrical engineering, computer science or mathematics
- Very good command of English (spoken and written)
- Independent, structured and analytical way of working
- Strong team and communication skills
- Enthusiasm for technical topics

Your Tasks

- System analysis and elaboration of requirements specifications
- Software development in C / C ++
- Development of software architecture and software design
- Conducting acceptance tests with the customer
- Development of software quality improvement solutions
- Further development of existing customer projects
- Working in interdisciplinary agile software development teams

Our Offer

- Safe workplace
- Professional, open and friendly working environment
- Respectful interaction with employees
- Exciting tasks in demanding projects
- Personal development and career opportunities

Interested? Then we look forward to receiving your CV.

Please note that we will review all applications and only those candidates selected for further consideration will be contacted directly.

Equal Opportunity and Diversity

Our work involves developing relationships with people from a wide range of backgrounds and cultures. Working effectively with diversity and promoting equality of opportunity is therefore essential for us.
